CLEAN 2115AL

Low-foam Spray Washing Compound

Master STAGES™ CLEAN 2115AL is an aluminum compatible, high-performance, low-foam synthetic washing compound for use in very high-pressure spray washers, de-burring, and water jet cutting. Advanced surfactant technology provides excellent foam control and tramp oil rejection.

Cleaners+RP

Major Japanese manufacturer recommends CLEAN 2115AL for de-burring
Because CLEAN 2115AL de-burrs and cleans parts in their extremely high-pressure machines in one operation, a major Japanese manufacturer recommends it to their customers for use in their de-burring machines. Even at pressures up to 500 Bar, CLEAN 2115AL performs without foam or unwanted residue, for clean, well-protected parts.

De-burring

Choose CLEAN 2115AL:
- Compatible with a wide range of materials including aluminum, cast iron, steels, zinc, plastics, and composites
- Resists foaming even when contaminated with large quantities of soils or coolant. This makes CLEAN 2115AL an excellent choice where rapid buildup of coolant carryover creates a foam problem
- Many CLEAN 2115AL applications are in the range of 3,000 to 10,000 PSI (20684 to 68947 kPa)
- Provides short-term corrosion inhibition on cast iron and ferrous alloys
- Excellent biostability
- Extremely low carryoff keeps operating costs down
- Low foam and mist
- Very low initial odor level
- Exceptional sump life and great tramp oil rejection

CLEAN 2115AL especially for:
Applications — corrosion inhibition, de-burring, high-pressure spray washing, parts washing, VHP spray (very high pressure), vibratory, and water-jet cutting
Soils — coolant residues
Metals — aluminum, aluminum alloys, brass, bronze, cast iron, composites, copper, copper alloys, ferrous metals, plastics, steel alloys, steels, and zinc
Industries — automotive
CLEAN 2115AL is free of — nitrites and silicates
CLEAN 2115AL

Low-foam Spray Washing Compound

Application Guidelines

- In very high-pressure spray washers (over 1,000 PSI, 6894.76 kPa), de-burrers or water jet cutters, typical concentrations are 3% to 5%, and operating temperatures are ambient up to 140°F (60°C).
- Foam may increase if the temperature is below 80°F (27°C) at the point of agitation.
- For best corrosion resistance on ferrous parts, concentration should be kept between 5% and 10%.
- CLEAN 2115AL has excellent aluminum compatibility. However, it is wise to pre-check tolerance for high temperatures (over 120°F, 50°C) or long exposure times (over 5 minutes) when washing 2000, 5000, or 7000 series wrought, or 300 series cast alloy.
- For additional product application information, including performance optimization, please contact your Master Fluid Solutions' Authorized Distributor at https://www.2trim.us/distributors.php, your District Sales Manager, or call our Tech Line at 1-800-537-3365.

CLEAN 2115AL

Low-foam Spray Washing Compound

Mixing Instructions

- Recommended usage concentration in water: 3.0% - 10.0%.
- To help ensure the best possible working solution, add the required amount of concentrate to the required amount of water (never the reverse) and stir until uniformly mixed.

Additional Information

- Industrial Use Only
- Consult Master Fluid Solutions before using on any metals or applications not specifically recommended.
- This product should not be mixed with other metalworking fluids or metalworking fluid additives, except as recommended by Master Fluid Solutions, as this may reduce overall performance, result in adverse health effects, or damage the machine tool and parts. If contamination occurs, please contact Master Fluid Solutions for recommended action.
